

Struggling to control very high levels of triglycerides?

If so, you may qualify for the ENTRUST study, which is testing an investigational research medication to find out if it can lower triglyceride (TG) levels.

The ENTRUST study is a clinical research study for **adults (age 22 and older) with very high TG levels (500 mg/dL* or higher)**, a condition known as severe hypertriglyceridemia (SHTG).

*5.7 mmol/L

Study participants receive:

- Possible access to the research medication (a weekly injection)
 - For every 4 participants who join, 1 participant receives a placebo (no active ingredients)
- Study support and monitoring by a healthcare team
- Education about SHTG
- Possible reimbursement for time and travel
- The opportunity to help advance SHTG research
